

It is so important to keep funds to improve water quality in our state. The old and decaying pipes in Bridgeport and the water runoff system have delivered pollution to Long Island Sound for years. Clean water is our most precious asset and would restore the shell fishing and myriad species of aquatic life to our Sound. It is so important to protect these waters for the future generations and for the economic resources of recreation and tourists who enjoy these waters. Thank you. Mary Keane, Trumbull Land Trust, etc.
